PROFILE

Muhammad Fachril Firmansyah is a 6th-semester Computer Science student at Binus University with a strong interest in software development and Artificial Intelligence, particularly Computer Vision and Machine Learning. He has experience developing web-based projects using JavaScript, React, and Node.js, along with a foundational understanding of AI implementation. He is currently preparing for a career as a Software Engineer or AI Engineer and is open to internship, freelance, and entry-level opportunities.

EDUCATION

Binus University

2023 - Present

Undergraduate of Computer Science | GPA : 3.85

Streaming : Artificial Intelligence

EXPERIENCE

Mathematics Teacher SMK Penerbangan Dirghantara | Tangerang

(2025 – 2026)

Worked as a mathematics teacher while developing and managing the school profile website for SMKPD. Built responsive web pages, managed content updates, and optimized performance to deliver information effectively.

Informatics Teacher SMA Pramita | Tangerang

(2025 – 2026)

Worked as an Informatics teacher at SMA Pramita, focusing on teaching programming fundamentals and guiding students in coding, problem-solving, and developing basic software projects.

Web Developer Pemoeda.ofc | Jakarta

(2024 – 2025)

Designed and developed responsive web applications with a focus on performance, scalability, and user-friendly design. Optimized speed, usability, and SEO while delivering reliable and maintainable solutions.

PAST PROJECTS

AsphaltEye - Road Damage Detection System (2026)

Real-time road inspection system built with YOLOv11, PyTorch, Flask, and React to detect potholes and cracks, featuring an automated inference pipeline and GPS-tagged community reporting.

Tanara — SIBI Sign Language Detector (2026)

Interactive web platform developed using TensorFlow, MediaPipe, Flask, and React to translate 36 SIBI gestures into text via lag-free, real-time webcam streaming.

Rekita - Smart Waste Management App (2025)

Mobile application prototype designed in Figma and Adobe Photoshop, aims to improve waste management in Indonesia through AI, geo-mapping, and gamification features that encourage more environmentally friendly habits.
